

# These days it's all about "feelings"

Why just "feel good" about your thread quality, when you can be certain that the parts being threaded are right on the number every time.

Ring and plug gages, or sometimes referred to as "feel good" gages, provide a false sense of security because the exact size of the thread is never known. Gagemaker's Pitch Diameter and Functional Roll Gages clearly display pitch diameter and functional size on the indicator. No guessing or operator "feel" that could influence quality. You will be cutting perfect parts more efficiently every time when using Gagemaker thread gages.

If you want to "feel" good about your quality, rely on Gagemaker's thread inspection and calibration equipment.

To feel better now, visit our newly renovated website, [www.gagemaker.com](http://www.gagemaker.com).

Gagemaker products are made in the USA.
