

ADAPTIVE

FUNCTIONAL EXTERNAL
THREAD INSPECTION

At Gagemaker, we have continued to adapt to the changing needs of the industry, while ring and plug gages remain the same. Gagemaker's functional thread inspection gages, also known as GO gages, will change the way you measure threads. You demand greater accuracy, flexibility, durability, and safety. Our RG-7000 series and PG-6000 series provide the quality and dependability you expect.

The RG-7000 series measures a broad range of external diameters over several different thread forms. Our interchangeable precision thread rolls allow the RG-7000 series to accurately measure variations of lead, thread height, and pitch diameter, while eliminating any unnecessary damage to the thread. Easily gage UN Series, ACME, Stub ACME, ISO Metric, Whitworth, and 7° X 45° Buttress thread forms with the RG-7000 and the proper thread rolls. If you have a special thread form, the RG-7000 can be fitted with special rolls designed to your specifications.

BEHAVIOR

FUNCTIONAL INTERNAL
THREAD INSPECTION

Gagemaker's PG-6000 series is the internal version of the RG-7000 series. It incorporates all the same abilities and features of the RG-7000 into a series of premium internal GO gages. It delivers the same consistent exemplary performance of all of our products. Functional pitch diameter gage setting dimensions are provided by Gagemaker's Thread Disk for Windows (TDWIN) software package.

Gagemaker continually pursues and enacts the most innovative methods, products, and service. We pride ourselves for our excellence in manufacturing and customer service. We promise to continue to conduct ourselves as the leaders of the industry.

Our newly revamped and redesigned product catalog is now available. Please go to our website, www.gagemaker.com, for more information.
