

CG-1000
Calibrator Gage

CG-1000E
Electronic Calibrator Gage

The Gagemaker calibrator gage, CG-1001, calibrates gages and indicators per AGD specification. The CG-1001E is our electronic version of the original and it includes an SPC output.

The CG-1001 uses a non-rotating spindle screw type micrometer which reads directly to .0001" and can be estimated to the closest .00005". Disassembling the gage is not required for calibration. The vise assembly allows full vertical and horizontal adjustment of the gage or indicator clamped in the vise jaws. During calibration, an outboard arm and arm support allows for larger gage assemblies to be securely supported.

Four supplied accessory fixtures will help speed up calibration while maintaining accuracy.*

The CG-1000 gages are shipped in a durable custom shipping/storage case. Optional wooden storage cases are available.

FEATURES

- Four accessory fixtures for different calibrations
- Mechanical or electronic readout available
- Durable shipping/storage case

CALIBRATOR GAGES

Model	Description	Range	Accuracy
CG-1001	Bench Calibrator Gage	.0001" Resolution, Mechanical	±.0001
CG-1001E	Electronic Bench Calibrator Gage w/ SPC Output	.00005"/.001 mm Resolution, Digital	±.00015

*Individual replacement fixtures are available for purchase but not listed above.
Please call for more information.

HOW TO ORDER

1. Select either the mechanical or electronic version of the calibrator gage.
